The Aerodrome Manual denotes the management structure that the Airport has in place to ensure a systematic approach to aerodrome operations. Its principal objective is to show how Airport management shall fulfil their safety accountabilities and responsibilities. It contains relevant policies, standards and procedures by which this shall be achieved.

Aerodrome Manual | London Stansted Airport

The Gatwick Airport aerodrome manual contains details of the characteristics, policies and procedures for the safe operation of the airport. It complies with all applicable requirements and with the terms of the EASA Aerodrome Certificate. The manual describes the systematic approach to the operation of the aerodrome, demonstrating our commitment to managing the aerodrome safely and effectively.

Aerodrome manual - Gatwick Airport

The Aerodrome Manual consists of 5 parts, as follows:-. Part A - General Part B - Aerodrome Management System, qualification and training requirements Part C - Particulars of the aerodrome site Part D - Particulars of the aerodrome required to be reported to the Aeronautical Information Service.

Aerodrome Service Manual Icao

The Aerodrome Manual contains details of the characteristics, policies and procedures for the safe
operation of Gatwick Airport and complies with all applicable requirements and with the terms of the
EASA Aerodrome Certificate.

In accordance with ICAO provisions, countries are required to establish at every airport an emergency
plan commensurate with the aircraft operations and other activities conducted at the airport. This
manual will assist countries in the implementation of these specifications and thereby ensure their
uniform application. Covers pre-planning for airport emergencies, as well as co-ordination between the
different airport agencies and those of the surrounding community that could be of assistance in
responding to an emergency. Includes a sample emergency exercise critique form, glossary, and
references. Illustrated.

The objective of this book is to provide ICAO, States, competent authorities and aerodrome operators with a comprehensive overview of legal challenges related to international aerodrome planning. Answers to derived legal questions as well as recommendations thereafter shall help to enhance regulatory systems and to establish a safer aerodrome environment worldwide. Compliant aerodrome planning has an immense impact on the safety of passengers, personnel, aircraft – and of course the airport. Achieving a high safety standard is crucial, as many incidents and accidents in aviation happen at or in the vicinity of airports. Currently, more than 40% of the ICAO Member States do not fully comply with international legal requirements for aerodrome planning. Representatives of ICAO and States, as well as aerodrome and authority personnel, will understand why compliance with the different legal facets of aerodrome planning is challenging and learn how shortcomings can be solved.

The implementation of Safety Management Systems at international airports was one of the most considerable changes in the regulatory framework for the operation and licensing of aerodromes in recent years. However, even more than five years after its inception it appears that the high expectations ICAO has placed on what has been designed as paradigm shift in the way of doing business in the airport industry were not materializing and Safety Management Systems appear at best to only marginally impact the safety performance of airports. Based on the lessons learned from the implementation of SMS in Germany an ideal organizational set-up for a most effective aerodrome SMS shall be designed. This proposal of an ideal organizational set-up shall be validated through a model implementation at a representative airport and subsequent long term observation in live operation. This model implementation serves as a basis from which recommendations for a future European regulation of Aerodrome Safety Management Systems under the EASA system shall be derived.

The book is dedicated as an auxiliary literature for academic staff of universities, research institutes, as well as for students of transport teaching. The aim of the conference was to present the achievements of national and foreign research and scientific centers dealing with the issues of rail, road, air and sea transport in technical and technological aspects, as well as organization and integration of the environment conducting research and education in the discipline of civil engineering and transport. International Scientific Conference Transport of the 21st Century was held in Ryn, Poland, in the 9th–12th of June 2019. The research areas of the conference were as follows: • transport infrastructure and communication engineering, • construction and operation of means of transport, • logistics engineering and transport technology, • organization and planning of transport, including public transport, • traffic control systems in transport, • transport telematics and intelligent transportation systems, • smart city and electromobility, • safety engineering and ecology in transport, • automation of means of transport. It also used by specialists from central and local government authorities in the area of deepening knowledge of modern technologies and solutions used for planning, managing and operating transport.
