It is important to note that chemical indicators alone do not confirm that an item is sterile.

Chemical indicators must be used as part of comprehensive quality control program, that also includes the use of biological indicators and physical monitors, to assure that the conditions for sterilization were met.

Definition . An acid-base indicator is either a weak acid or weak base that exhibits a color change as the concentration of hydrogen (H^+) or hydroxide (OH^-) ions changes in an aqueous solution. Acid-base indicators are most often used in a titration to identify the endpoint of an acid-base reaction.
