New York City has the largest medical examiner's office in the United States, and the Brooklyn division is the busiest of the five boroughs. Charles A. Catanese received his Forensic Pathology fellowship training in New York, and then worked full time as a Medical Examiner in the Brooklyn office for more than 10 years. He has personally performed more than 4000 autopsies, including over 400 homicides. Dr. Catanese has worked through several disasters, including TWA Flight 800, AA Flight 587, and more than nine months on the World Trade Center fatalities. He is currently the Chief Medical Examiner of Orange County, New York. Drawing on his wealth of knowledge and experience in solving some of the most difficult cases a forensic examiner could encounter, he assembles hundreds of images from his own work experience to present the Color Atlas of Forensic Medicine and Pathology. Featuring twice the number of images as any other forensic pathology atlas, the book is filled with high-resolution photos that demonstrate postmortem changes of the human body and the different types of patterns produced in deaths caused by: Natural causes Diagnostic or therapeutic procedures Substance abuse Poisoning Child abuse Firearms Blunt instruments Sharp instruments Burns Asphyxia This easy-to-read atlas, created for medical and non-medical personnel, covers basic and advanced forensic concepts that relate to all manners of deaths. The carefully worded, unambiguous text describing each photo and the side-by-side comparisons of similar, yet different, pathologies make this remarkable atlas a powerful teaching tool for all those who must confront and solve the mystery of human demise. A fully searchable DVD version is also available.

This second edition of a bestseller features twice the number of images as any other forensic pathology atlas. It demonstrates visually the postmortem changes of the human body and the different kinds of patterns produced in deaths caused by natural causes, diagnostic or therapeutic procedures, substance abuse, poisoning, child abuse, firearms, blunt instruments sharp instruments, burns and asphyxia. New to this edition are 400 additional photographs and a new section covering histopathology, never before offered in print.

New York City has the largest medical examiner's office in the United States, and the Brooklyn division is the busiest of the five boroughs. Charles A. Catanese received his Forensic Pathology fellowship training in New York, and then worked full time as a Medical Examiner in the Brooklyn office for more than 10 years. He has personally performed more than 4000 autopsies, including over 400 homicides. Dr. Catanese has worked through several disasters, including TWA Flight 800, AA Flight 587, and more than nine months on the World Trade Center fatalities. A fully searchable DVD version is also available.

A male homicide victim with a shotgun blast to the chest. A female drug addict who has overdosed on crack cocaine. An elderly woman with deep stab wounds to the neck. A two-year-old motor vehicle accident victim with blunt head trauma. For forensic pathologists, police detectives, and crime scene investigators, dealing with death and injury is a daily routine. But even after investigating thousands of drownings, shootings, stabbings, electrocutions, overdoses, and traffic accidents, most professionals in the investigative fields still haven't seen it all. Originally published on CD-ROM, the Color Atlas of Forensic Pathology addresses much of the basic information which forensic pathologists and other investigators deal with on a day to day basis. Packed with 780 full-color, captioned photographs, this atlas examines everything from time of death and decomposition, to identification, to causes of death from blunt trauma, firearm injuries, asphyxia, cutting and stabbing injuries, and more. The atlas shows the various causes of death and injury with case -- "visuals" to help investigators understand the work they perform. Indeed, with its exhaustive coverage, the Color Atlas of Forensic Pathology will provide investigators with valuable insight into the many different causes of death and injury they must deal with and how the manners of death are diagnosed.

In the wake of the Daubert ruling, the use of forensic toolmark evidence in court has been problematic, in that the conclusions of forensic scientists as to toolmark origin often lack scientifically sound statistical proof. In the Color Atlas of Forensic Toolmark Identification, noted forensic expert Nicholas Petraco helps move toolmark examination

This book is specifically designed for non-pathologists who normally interact with forensic pathologists. It covers topics within forensic pathology, including the forensic autopsy, postmortem changes and time of death and body identification.

Featuring twice the number of images as any other forensic pathology atlas, this DVD version demonstrates visually the postmortem changes of the human body and the different kinds of patterns produced in deaths caused by natural causes, diagnostic or therapeutic procedures, substance abuse, poisoning, child abuse, firearms, blunt instruments sharp instruments, burns and asphyxia. New to this edition will be an additional 400 photographs including a complete new section covering histopathology.

In keeping with the spirit of the first edition, the second edition of this book displays the autopsy procedure in a step-wise, start-to-finish fashion. While the autopsy itself has changed little over the last 100 years, the adjunct procedures—toxicology, radiology, and DNA analysis, among others—have changed greatly. Original chapters are fully updated and modified to reflect changes in the last 15 years. Additionally, two new chapters have been added on natural death and organ/tissue donation.

Professionals in many disciplines, from archeology to forensic science and anthropology, must be able to identify organic and inorganic fibers and particles. In a single source, this book presents a range of simple methods to help readers quickly characterize and identify a broad range of materials. Covering substances such as hair and fibers, mine
