Introduction to computer science and programming.pdf :::

This book is the first of a two-course sequence: Introduction to Computer Science and Programming Using Python, and Introduction to Computational Thinking and Data Science. Together, they are designed to help people with no prior exposure to computer science or programming learn to think computationally and write programs to tackle useful problems.

Introduction to Computer Science and Programming Using :::

When a computer is performing the tasks that a program tells it to do, we say that the com-puter is running or executing the program. The central processing unit, or CPU, is the part of a computer that actually runs programs. The CPU is the most important component in a computer because without it, the computer could not run software.

CHAPTER Introduction to Computers and Programming

This half-semester course introduces computational concepts and basic programming. Students will develop confidence in their ability to apply programming techniques to problems in a broad range of fields. This course uses the Python 3.5 programming language.

Introductory Programming Courses + MIT OpenCourseWare :::

6.0001 Introduction to Computer Science and Programming in Python is intended for students with little or no programming experience. It aims to provide students with an understanding of the role computation can play in solving problems and to help students, regardless of their major, feel justifiably confident of their ability to write small programs that allow them to accomplish useful goals.
