Proceedings of the Second Bath International Fluid Power Research Workshop held in September 1989. Contributors address recent developments in the control of valves, pump design and performance, pressure ripple and noise, servo-systems, modelling and simulation and circuits for mobile systems.

This paper reviews economic developments in Suriname during 1994 – 96. In 1995, there was a major turnaround in Suriname ' s economic and financial situation following the expansionary fiscal and monetary policies pursued in the first half of the 1990s and the political and economic disruptions of the 1980s. The marked improvement was owing to the restoration of financial discipline, a strengthening of international bauxite prices, and the unification and subsequent stabilization of the exchange rate. The inflation fell further to less than 1 percent in 1996.

Lasers are progressively more used as versatile tools for fabrication purposes. The wide range of available powers, wavelengths, operation modes, repetition rates etc. facilitate the processing of a large spectrum of materials at exceptional precision and quality. Hence, manifold methods were established in the past and novel methods are continuously under development. Biomimetics, the translation from nature-inspired principles to technical applications, is strongly multidisciplinary. This field offers intrinsically a wide scope of applications for laser based methods regarding structuring and modification of materials. This book is dedicated to laser fabrication methods in biomimetics. It introduces both, a laser technology as well as an application focused approach. The book covers the most important laser lithographic methods and various biomimetics application scenarios ranging from coatings and biotechnology to construction, medical applications and photonics.

Water Management Challenges in Global Change contains the proceedings of the 9th Computing and Control for the Water Industry (CCWI2007) and the Sustainable Urban Water Management (SUWM2007) conferences. The rationale behind these conferences is to improve the management of urban water systems through the development of computerbased methods. Issues such as economic globalisation, climate changes and water shortages call for a new approach to water systems management, which addresses the relevant technical, social and economic aspects. This collection represents the views of academic and industrial experts from a number of countries, who provide technical solutions to current water management problems and present a vision for addressing the global questions. The themes underlying many of the contributions include energy and material savings, water savings and the integration of different aspects of water management. The papers are grouped into three themes covering water distribution systems, sustainable urban water management and modelling of wastewater treatment plants. The water distribution topics cover asset and information management, planning, monitoring and control, hydraulic modelling of steady state and transients, water quality and treatment, demand and leakage management, optimisation, design and decision support systems, as well as reliability and security of water distribution systems. The sustainable urban water management topics include urban drainage systems, water reuse, social aspects of water management and also selected facets of water resources and irrigation. Computer control of wastewater treatment plants has been seen as less advanced than that of clean water systems. To address this imbalance, this book presents a number of modelling techniques developed specifically for these plants. Water Management Challenges in Global Change will prove to be invaluable to water and environmental engineering researchers and academics; managers, engineers and planners; and postgraduate students.

"The first woman in the world to exceed 300 mph in a dragster"--Cover.

An examination of human obesity including the techniques for studying body composition and energy intake and expenditure; the definition, prevalence, epidemiology and aetiology of obesity, associated diabetes and other diseases, and its treatment and prevention are covered.

College Ruled Color Paperback. Size: 6 inches x 9 inches. 55 sheets (110 pages for writing). Space Abduction. 157896945415

The Student Writer: Editor and Critic strengthens the text ' s commitment to helping students become better writers by helping them develop their own successful writing processes and by helping them become reliable critics and editors of their own texts. It also maintains the text ' s commitment to demonstrating the importance of writing across the curriculum, in the workplace, and in students ' private lives.

Clear, step-by-step writing instruction, ample annotated student essays, and extensive practice opportunities for writing have made The Longman Writer one of the most successful methods-of-development guides for college writing. Created by the authors of the best-selling Longman Reader, the text draws on decades of teaching experience to integrate the best of the "product" and "process" approaches to writing. Its particular strengths include an emphasis on the reading-writing connection, a focus on invention and revision, attention to the fact that patterns blend in actual writing, and an abundance of class-tested activities and assignments – more than 350 in all.
