Love knits the inquisitive members of the Curious 4 together: love for mystery, love for uncovering the hidden and deciphering the cryptic and most of all, love for one another. They get more than they bargained for when they take on a case that's anything but it seems. They live for the thrill that comes with secrets, but can their ties hold strong when the lies and deceit that follow these secrets threaten their bond? Will this case be a breakthrough or cause an utter breakdown?

The difference between seeing and looking is essential—much like the difference, in music, between hearing and listening. In Creative Visualization, master photographer, photo educator and photo instructor Rick Sammon presents his proven methodology for creative digital photography. His signature inspiring and motivating approach opens creative avenues for photographers in a variety of genres. With easy-to-follow examples, Sammon shows you how simple changes—with visualization, composition, post-processing, and more—can mean the difference between a snapshot and a great shot. This book, illustrated with more than 300 of Rick's photographs, includes invaluable information about exposure, composition, subject choice, lighting, mood, and depth. In the Food for Thought section, Rick offers guidelines for setting goals, getting motivated, connecting with a subject, learning, painting with light, thinking like a painter and more. In Develop Your Creative Vision, Rick takes you on an exploration of composition, exposure, making images with impact, creating a mood, altering reality, and pursuing your passion. Corrective and creative image processing techniques, as well as HDR, EDR, panoramas and black-and-white imaging, are covered in the Image Processing Specialties section. Rick also shares a chapter on self-assignments - photo challenges - that you can use to expand your photographic horizons. Canon Explorer of Light and master photographer Rick Sammon shares the secrets behind learning to see photographically, to make the necessary changes that will have a noticeable impact on your photographs Includes easy-to-follow instruction for post-processing techniques in Lightroom and Photoshop. Tips for making the best HDR and EDR images are also included, as well as illustrations of how plug-ins can help photographers awaken the artist within. Uses clear, visual examples of "photo failures" photographs side-by-side with successful ones, outlining the small, but important changes—to composition, framing, exposure, etc.—that can immediately make a significant difference

After the apocalypse, no one is safe; not even at the North Pole. After tragedy strikes, Santa withdraws from life and turns his back on Christmas. When he finally emerges from seclusion, the old world is gone forever, and as Santa struggles to find his way in a post-apocalyptic world, can he find a way to save Christmas too?

“An excellent introduction to graphic design through [the author’s] own excellent work. Anyone interested in the subject, including most practitioners, will find it delightful.”—Milton Glaser Kids love to express themselves, and are designers by nature—whether making posters for school, deciding what to hang in their rooms, or creating personalized notebook covers. Go, by the award-winning graphic designer Chip Kidd, is a stunning introduction to the ways in which a designer communicates his or her ideas to the world. It’s written and designed just for those curious kids, not to mention their savvy parents, who want to learn the secret of how to make things dynamic and interesting. Chip Kidd is “the closest thing to a rock star” in the design world (USA Today), and in Go he explains not just the elements of design, including form, line, color, scale, typography, and more, but most important, how to use those elements in creative ways. Like putting the word “go” on a stop sign, Go is all about shaking things up—and kids will love its playful spirit and belief that the world looks better when you look at it differently. He writes about scale: When a picture looks good small, don’t stop there—see how it looks when it’s really small. Or really big. He explains the difference between vertical lines and horizontal lines. The effect of cropping a picture to make it beautiful—or, cropping it even more to make it mysterious and compelling. How different colors signify different moods. The art of typography, including serifs and sans serifs, kerning and leading. The book ends with ten projects, including an invitation to share your designs at GoTheBook.com.

Degas was closest to Renoir in the impressionist's circle. He started his apprenticeship in 1853 at the studio of Louis-Ernest Barrias and, beginning in 1854, studied under Louis Lamothe, who revered Ingres above all others and transmitted his adoration for this master to Edgar Degas. Starting in 1854, Degas frequently traveled to Italy where he copied from the Old Masters. His drawings and sketches already revealed very clear preferences, especially in Raphael, Leonardo da Vinci, Michelangelo, and Mantegna. After his first compositions, which depicted horses, Degas made yet another discovery. His first painting devoted solely to the ballet was *Le Foyer de la danse à l'Opéra de la rue Le Peletier* (The Dancing Anteroom at the Opera on Rue Le Peletier, Musée d'Orsay, Paris). In a carefully constructed composition, with groups of figures balancing one another to the left and the right, each ballet dancer is involved in her own activity, each moving in a separate manner from the others. Extended observation and an immense number of sketches were essential to executing such a task. Ballet would remain his passion until the end.
