Provides an introduction to the technical and business aspects of mobile telecommunications, exploring the complete eco-system of the industry with the key segments and how they interact with each other. This industry has seen rapid technical advancements in recent years, yet the basics of providing coverage and capacity to the end users have not changed. The authors introduce these technical basics to the reader and then show how a network is deployed. Technical innovation has been pivotal to the rapid

advancement of this industry and the book details some of the main innovations over the years. The book highlights some of the current challenges the industry is facing and how innovation is driven by these challenges. Mobile operators business structures are examined, from the purchasing spectrum to deploying the network and attracting and retaining customers. The role of the regulator is not overlooked, and its role in ensuring a competitive market where consumers have sufficient choice. The authors detail current challenges faced by the operators and how they are using business innovation to overcome these challenges. In describing the changing face of mobile telecoms, the book covers business challenges as well as the technological challenges faced today by the industry. The advent of the Smart phones, which support multiple technologies that compliment and sometimes compete with mobile cellular technology has had a profound impact on the industry, sometimes challenging the role of the mobile operator. A discussion of these yet-unanswered challenges provides some insight into where the industry is heading. The technical aspects of this book are pitched at undergraduate first year mathematics and physics subject levels, making it easily comprehensible to the undergraduate students studying relevant fields. As the title denotes, this book will be at an introductory level, giving a broad coverage to many of the significant technical and business aspects of the industry.

The SAGE Handbook of Organizational Wellbeing is a comprehensive and cutting-edge work providing the latest insights into a range of perspectives on organizational wellbeing, as well as highlighting global wellbeing issues and exploring new contexts. Topics covered include: digital working and social media, LGBTQIA+ identifications and

work, suicide at work, refugee workers, and mental health. A multi- and inter-disciplinary work, this handbook embraces ideas and empirical work from a range of fields including psychology, business and management, economics, and science. This handbook draws together current knowledge whilst also outlining emerging issues and directions, making this an invaluable resource for students and researchers spanning a wide array of disciplines. Part 1: Theoretical Perspectives Part 2: International Issues and Contexts Part 3: Developing Organizational Wellbeing Part 4: Emerging Issues and Directions

This title was first published in 2002: This volume gives details of nearly 1000 publications and services (including electronic publications) produced by trade associations, professional bodies, banks, consultants, employers' federations, forecasting organizations and others, together with statistics appearing in trade journals and periodicals. Titles and services are listed alphabetically by publisher and each entry contains information, where available, on subject, content and source of statistics, as well as frequency and cost, and address, telephone and fax details for further information. This updated edition also includes details of internet sites and information on whether statistics are available on those sites.

This two-volume set (LNAI 11055 and LNAI 11056) constitutes the refereed proceedings of the 10th International Conference on Collective Intelligence, ICCCI 2018, held in Bristol, UK, in September 2018 The 98 full papers presented were carefully reviewed and selected from 240 submissions. The conference focuses on knowledge engineering and semantic web, social network analysis, recommendation methods and recommender systems, agents

and multi-agent systems, text processing and information retrieval, data mining methods and applications, decision support and control systems, sensor networks and internet of things, as well as computer vision techniques.

In the context of climate change, world population growth and crashing ecological systems, wildfire is often a catastrophic and traumatic event. Its impact can include loss of life, life-changing injuries, long-term psychological stress; increases in domestic violence; destruction of properties, business and livestock; long-term housing insecurity; increased insurance premiums, fire-fighting, legal and health costs; as well as significant changes and species losses in the natural environment. In Australia, an average of 4,500 wildfires occur weekly. Yet how to prevent these wildfires, 85% of which are caused by human activities, has received extraordinarily little attention. The current approach to the prevention of arson can be summarised as small in scale, uncoordinated and rarely evaluated. ‘Feeling the heat: International perspectives on the prevention of wildfire ignition’ is the culmination of over a decade of research into wildfires and arson; taking an interdisciplinary approach to comprehensively understand the topic. This book reviews current international knowledge and presents new findings on political, spatial, psychological, socio-ecological and socio-economic risk factors. It argues that if we are to reverse the increasing occurrence and severity of wildfires, all prevention approaches must be utilised, broadening from heavy reliance on environmental modification. Such prevention measures range from the critical importance of reducing greenhouse gases to addressing the psychological and socio-economic drivers of arson. In particular, it calls for

a coordinated and collaborative approach across sectors, including place-based, state and country coordination, as well as an international body. It will hold appeal for researchers and students from a range of disciplines and interests, government planners and policymakers, emergency services, counsellors and NGOs, and those in agriculture and forestry.

How does it feel to be a police officer in the UK? What happens in the brains of officers, particularly in high-risk roles such as counter-terrorism and child sexual exploitation? Jessica Miller uses the most recent neuroscience and real-life examples to explore risks to individual resilience, be it trauma exposure, burnout or simply the daily pressure of adapting to life on the front line. A compulsory read for anyone with an interest in policing, the book offers practical, easy-to-follow resilience techniques applicable to anyone in the wider emergency responder community. The book also offers policy and operational recommendations to equip police officers with skills to face crime in a post-COVID world.

Is justice possible for a woman raped in contemporary patriarchal culture? This book explores one of the major conundrums of our time: given all the feminist activism and reforms of the last 50 years, why does rape remain so prevalent and justice so elusive? In exploring these questions, Jan Jordan takes us back into the patriarchal origins of our rape culture in order to trace the connections between past laws and current justice realities. Her examination covers developments in police and court processes and explores the connections between men, masculinity, and rape before considering the scope of rape prevention. She argues the need for urgent transformation of

the rape-condoning cultures that currently make it impossible for rape prevalence to abate or for rape victims to receive justice.

This edited collection from leading scholars in the fields of media, communications, cultural studies and a number of aligned areas looks to the intersection of capitalism, crime and the media. The text is founded on the principles of cultural criminology – that how we determine and understand crime lies in the social world and that the determination of crime and its mediation in popular culture have a political basis. The book consists of eleven chapters and is divided into three sections. Section one considers the intersection of crime and capitalism in a range of contemporary cultural texts. Section two examines how various power systems influence the operation of the media in its role of reporting crime and holding the powerful to account. Section three considers how texts in a variety of formats are used to conduct politics, communicate politics and enact political decision making.

Using Scanner Data for Food Policy Research is a practitioners ' guide to using and interpreting scanner data obtained from stores and households in policy research. It provides practical advice for using the data and interpreting their results. It helps the reader address key methodological issues such as aggregation, constructing price indices, and matching the data to nutrient values. It demonstrates some of the key econometric and statistical applications of the data, including estimating demand systems for policy simulation, analyzing effects of food access on food choices, and conducting cost-benefit analysis of food policies. This guide is intended for early-career researchers, particularly those working with scanner data in agricultural and food
