Community colleges face pressure to (do more with less) that have prompted many college leaders to consider fundamental changes to the ways they have typically done business. Because piecemeal solutions have not often been effective or efficient, colleges are moving far beyond discreet (programs) or (interventions,) and are attempting to implement comprehensive reform efforts. This volume conceptualizes comprehensive reform as being marked by: a focus on student success; a theory of change that ties programmatic components together in an intentional and cohesive package, implemented at multiple levels throughout the college and touching the majority of students; and a culture of evidence that uses data to continuously assess programs and processes against student success. Presenting original analyses that describe the rationale for comprehensive reform, this volume examines the challenges involved in implementing, evaluating, and sustaining those efforts. This is the 176th volume of this Jossey-Bass quarterly report series. Essential to the professional libraries of presidents, vice presidents, deans, and other leaders in today's open-door institutions, New Directions for Community Colleges provides expert guidance in meeting the challenges of their distinctive and expanding educational mission.

As the United States continues to be a nation of immigrants and their children, the nation's school systems face increased enrollments of students whose primary language is not English. With the 2001 reauthorization of the Elementary and Secondary Education Act (ESEA) in the No Child Left Behind Act (NCLB), the allocation of federal funds for programs to assist these students to be proficient in English became formula-based: 80 percent on the basis of the population of children with limited English proficiency1 and 20 percent on the basis of the population of recently immigrated children and youth. Title III of NCLB directs the U.S. Department of Education to allocate funds on the basis of the more accurate of two allowable data sources: the number of students reported to the federal government by each state education agency or data from the American Community Survey (ACS). The department determined that the ACS estimates are more accurate, and since 2005, those data have been basis for the federal distribution of Title III funds. Subsequently, analyses of the two data sources have raised concerns about that decision, especially because the two allowable data sources would allocate quite different amounts to the states. In addition, while shortcomings were noted in the data provided by the states, the ACS estimates were shown to fluctuate between years, causing concern among the states about the unpredictability and unevenness of program funding. In this context, the U.S. Department of Education commissioned the National Research Council to address the accuracy of the estimates from the two data sources and the factors that influence the estimates. The resulting book also considers means of increasing the accuracy of the data sources or alternative data sources that could be used for allocation purposes.
